Power networks generated by the current release

Fresh runs of packaged examples | All buses and branches shown | Non-geographic layouts

(a) Rural trunk and laterals

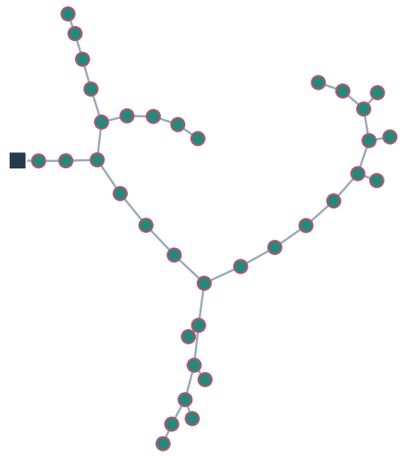

25 buses | 10 kV | 24 branches

Mean degree 1.92 | Cycle rank 0 | Checks passed

(b) Rural clustered feeder

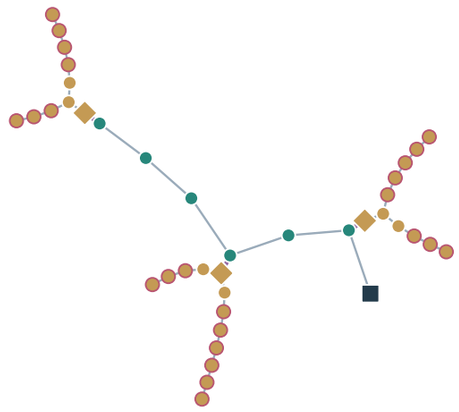

37 buses | 10 kV | 36 branches

Mean degree 1.95 | Cycle rank 0 | Checks passed

(c) Urban MV/LV feeder

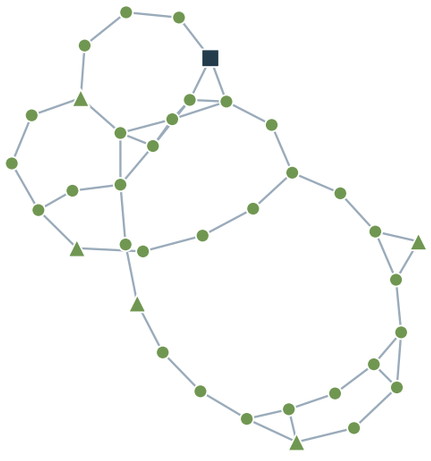

40 buses | 10/0.4 kV | 39 branches

Mean degree 1.95 | Cycle rank 0 | Checks passed

(d) Meshed transmission network

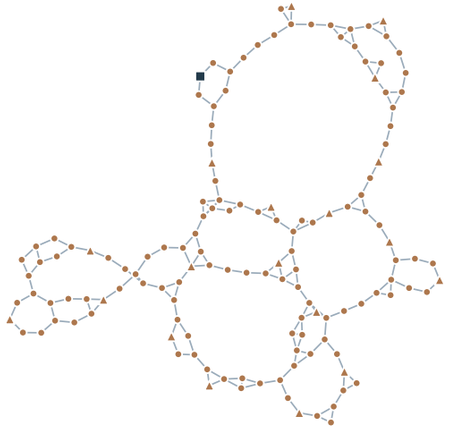

37 buses | 110 kV | 49 branches

Mean degree 2.65 | Cycle rank 13 | Checks passed

(e) Meshed transmission network

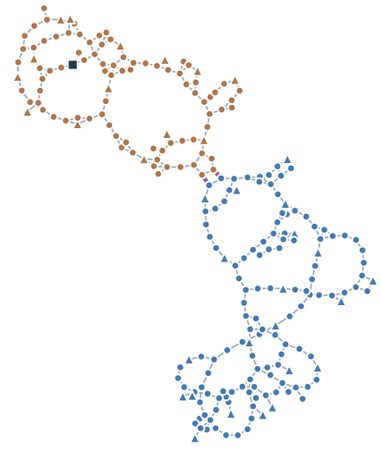

139 buses | 500 kV | 185 branches

Mean degree 2.66 | Cycle rank 47 | Checks passed

(f) Two-voltage transmission network

237 buses | 500/220 kV | 318 branches

Mean degree 2.68 | Cycle rank 82 | Checks passed

0.4 kV · 10 kV · 110 kV · 220 kV · 500 kV · Source / slack · Generator bus · Transformer LV bus · Transformer · PV attachment

Deterministic example demonstrations; not an estimate of natural-language generation success.
